

Expectation Maximization

1 Why

I am doing a homework on this.

2 Definition

Let Z and X be non-empty finite sets. We want to model a distribution $p^{\theta}: Z \times X \to \mathbf{R}$. We parameterize a family of distributions by a parameter θ . We have a dataset (x^1, \dots, x^n) . Given a parameter θ^0 , we want to solve

find
$$\theta$$
 to maximize
$$\sum_{k=1}^n \mathbf{E}_{p_{z|x}^{\theta^0}(z,x^k)} \left[\log p^{\theta}(z,x)\right]$$

2.1 Binary Gaussian Mixture Example
