

## **CONVEX SETS**

## Definition

A *convex set* contains every closed line segement between any two points. Every affine set is convex.

## Notation

Let x and y in  $\mathbb{R}^n$ . We can express the closed line segment between x and y as

$${x + a(y - x) \mid 0 \le a \le 1, x, y \in \mathbb{R}^n}.$$

Notice that x + a(y - x) = (1 - a)x + ay.

**Proposition 1.** Every affine set is convex.

**Proposition 2.** The intersection of a family of convex sets is convex.

**Proposition 3.** The translate of a convex set is convex. The scalar multiple of a convex set si convex.
