

SUBSPACE SUMS

Definition

The sum of two subspaces is the span of their union. So then the sum of two subspaces is also a subspace. If the intersection of two subspaces is the zero subspace, we call the sum a $direct\ sum$.

Notation

Let U and V be subspaces of a vector space. We denote the sum of U and V by U+V. We can express

$$U + V = \operatorname{span}(U + V).$$

If
$$S_1 \cap S_2 = \{0\}$$
