

## CONDITIONAL DEPENDENCY GRAPH

## Why

1

## Definition

Consider a set of two or more random variables. Two random variables in this set *dependent* if they are not conditionally independent, given all the other variables.<sup>2</sup> Call the undirected graph induced by this relation the *conditional dependency graph* of the random variables.

<sup>&</sup>lt;sup>1</sup>Future editions will include.

<sup>&</sup>lt;sup>2</sup>Future editions need a sheet on conditional independence.
