

## SUPREMUM NORM

## Why

We want a norm on the vector space of continuous functions.

## Definition

Consider a function from a closed real interval to the real numbers. The *absolute supremum* of the function is the absolute value of its results on the interval. Since the function is continuous and defined on a closed interval, the supremum is finite.

Proposition 1. The functional mapping  $f \in C[a,b]$  to its absolute supremum is a norm.

*Proof.* Let R denote the set of real numbers. Define  $\phi: C[a,b] \to R$  by:

$$\phi(f) = \sup\{|f(x)| \mid x \in [a, b]\}.$$

- 1.  $|f(x)| \ge 0$  for all  $x \in [a, b]$ , so  $\phi(f) \ge 0$ .
- 2. If  $\phi(f) = 0$  then  $|f(x)| \le 0$  for all x and so f(x) = 0 for all  $x \in [a, b]$ . If f = 0, then |f(x)| = 0 for all  $x \in [a, b]$
- 3. For all  $\alpha$  real,  $|\alpha f(x)| = |\alpha||f(x)|$ . so  $\phi(\alpha f) = |\alpha|\phi(f)$
- 4. For all  $f, g \in C[a, b]$ , and  $x \in [a, b]$ ,  $|f(x) + g(x)| \le |f(x)| + |g(x)|$  by the triangle inequality for absolute

value. Thus,

$$\phi(f+g) \le \sup\{|f(x)| + |g(x)| \mid x \in [a,b]\}$$
  
 
$$\le \sup\{|f(x)| \mid x \in [a,b]\} + \sup\{|g(x)| \mid x \in [a,b]\}$$
  
 
$$= \phi(f) + \phi(g)$$

We call the functional  $\phi$  defined above the *supremum norm*.

## Notation

Let  $f \in C[a, b]$ . We denote the supremum norm of f by  $|f|_{\sup}$ .
