

MONOTONE CLASSES

Why

1

Definition

The *limit* of an increasing sequence of sets is the family union of the sequence. The *limit* of a decreasing sequence of sets is the family intersection of the sequence.

A monotone limit of an sequence of sets is the limit of a monotone sequence.

A monotone class is a subset system in which monotone limits of monotone sequences of distinguished sets are distinguished. We call the distinguished sets a monotone class.

Notation

Let A a non-empty set with partial order \leq . Let (A, A) be a subset space on A.

Let $(A_n)_n$ be an increasing or decreasing sequence in \mathcal{A} . We denote the limit of $(A_n)_n$ by $\lim_n A_n$.

If $(A_n)_n$ is increasing, $\lim_n A_n = \bigcup_n A_n$. If $(A_n)_n$ is decreasing, $\lim_n A_n = \bigcap_n A_n$.

If (A, A) is a monotone space, then for all monotone $(A_n)_n$ in A, $\lim_n A_n \in A$. In this case, A is a monotone class.
