

## SET UNIONS AND INTERSECTIONS

## Why

We study how intersection and union interact.

## Results

The following are easy results.<sup>1</sup> They are known as the *distributive laws*.

**Proposition 1.** 
$$A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$$

**Proposition 2.** 
$$A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$$

<sup>&</sup>lt;sup>1</sup>The accounts will appear in future editions.
