

Ordered Pairs

1 Why

We speak of an ordered pair of objects: one selected from a first set and one selected from a second set.

2 Definition

Let A and B be non-empty sets. Let $a \in A$ and $b \in B$. The ordered pair of a and b is the set $\{\{a\}, \{a, b\}\}$. The first element of $\{\{a\}, \{a, b\}\}$ is a and the second element is b.

The cartesian product of A and B is the set of all ordered pairs. If $A \neq B$, the ordering causes the cartesian product of A and B to differ from the cartesian product of B with A. If A = B, however, the symmetry holds.

2.1 Notation

We denote the ordered pair $\{\{a\}, \{a,b\}\}$ by (a,b). We denote the cartesian product of A with B by $A \times B$, read aloud as "A cross B." In this notation, if $A \neq B$, then $A \times B \neq B \times A$.
