

Номомогрніѕм

Why

We name a function which preserves group structure.

Definition

A homomorphism from group (A, +) to group $(B, \tilde{+})$ is a function $f: A \to B$ such that $f(e_A) = f(e_B)$ for identities $e_A \in A$ and $e_B \in B$ and $f(a + a') = f(a)\tilde{+}f(a')$ for all $a, a' \in A$.
