

## INTEGER SUMS

## Why

We want sums to follow those of natural numbers.<sup>1</sup>

## **Definition**

Consider  $[(a,b)], [(b,c)] \in \mathbf{Z}$ . We define the *integer sum* of [(a,b)] with [(b,c)] as  $[(a+c,b+d)]^2$ 

## Notation

We denote the sum of [(a,b)] and [(c,d)] by [(a,b)] + [(b,c)] So if  $x,y \in \mathbf{Z}$  then the sum of x and y is x+y.

<sup>&</sup>lt;sup>1</sup>Future editions will modify this.

 $<sup>^2</sup>$ One needs to show that this is well-defined. The account will appear in future editions.
