

## EXPECTATION MAXIMIZATION

## Why

I am doing a homework on this.

## **Definition**

Let Z and X be non-empty finite sets. We want to model a distribution  $p^{\theta}: Z \times X \to \mathbb{R}$ . We parameterize a family of distributions by a parameter  $\theta$ . We have a dataset  $(x^1, \dots, x^n)$ . Given a parameter  $\theta^0$ , we want to solve

$$\mathbf{find}\quad\theta$$
 
$$\mathbf{to\ maximize}\quad\sum_{k=1}^n\mathbf{E}_{p_{z|x}^{\theta^0}(z,x^k)}\left[\log p^{\theta}(z,x)\right]$$

## 0.1 Binary Gaussian Mixture Example

The
