

MONOTONE ALGEBRAS

Why

TODO: changed to subset system

Closure under monotone limits is a weaker condition than that included in the definition of sigma algebras, but is sufficient if the set is also an algebra. TODO: why

Result

If a subset algebra is a monotone space, then it is a countably summable subset algebra.

Prop. 1. A subset algebra is a countably summable if either:

- 1. the limit of a nondecreasing sequence of distinguished sets is distinguished
- 2. the limit of a nonincreasing sequence of distinguished sets is distinguished.

Proof. TODO
