

## Differential Entropy

## 1 Why

We want a notion of entropy for continuous random variables.

## 2 Definition

The **relative entropy** of a probability density function is the integral of the density against the negative log of the density.

## 2.1 Notation

Let R denote the set of real numbers. Let  $f: R^n \to R$  be a probability density function. The differential entropy of f is

$$-\int f \log f$$

We denote the differential entropy of f by h(f).
