## Result

**Proposition 1.** A necessary condition for a maximizer of  $x^T A x$  subject to  $x \in \mathbb{R}^n$  and  $x^T x = 1$  is that  $A x = \lambda x$  where  $\lambda$  is the Lagrange multiplier...<sup>2</sup>

 $<sup>^1{\</sup>rm Future}$  editions will expand. Discussion will likely include eigenvalues.

<sup>&</sup>lt;sup>2</sup>Future editions will complete, and include references to lagrange multiplier, gradient, quadratic form, necessary conditions, etc.
