

Family Unions and Intersections

Why

We can use families to think about unions and intersections.

Family Unions

Let $A: I \to \mathcal{P}(X)$ be a family of subsets. We refer to the union (see Set Unions) of the range (see Relations) of the family the family union. We denote it $\bigcup_{i \in I} A_i$.

Proposition 1.
$$(x \in \bigcup_{i \in I} A_i) \longleftrightarrow (\exists i)(x \in A_i)$$

If
$$I = \{a, b\}$$
 is a pair with $a \neq b$, then $\bigcup_{i \in I} = A_a \cup A_b$.

There is no loss of generality in considering family unions. Every set of sets is a family: consider the identity function from the set of sets to itself.

We can also show generalized associative and commutative law¹ for unions.

Proposition 2. Let $\{I_j\}$ be a family of sets and define $K = \bigcup_j I_j$. Then $\bigcup_{k \in K} A_k = \bigcup_{j \in J} (\bigcup_{i \in I_j} A_i)^2$.

Family Intersection

If we have a nonempty family of subsets $A: I \to \mathcal{P}(X)$, we call the intersection (see Set Intersections) of the range of the family the family intersection. We denote it $\bigcap_{i \in I} A_i$.

¹The commutative law will appear in future editions.

²An account will appear in future editions.

Proposition 3. $x \in \bigcap_{i \in I} A_i \longleftrightarrow (\forall i)(x \in A_i)$

Similarly we can derive associative and commutative laws for intersection³. They can be derived as for unions, or from the facts of unions using generalized DeMorgan's laws (see Generalized SSet Dualities.

&Connections

The following are easy⁴

Let $\{A_i\}$ be a family of subsets of X and let $B \subset X$.

Proposition 4. $B \cap \bigcup_i A_i = \bigcup_i (B \cap A_i)$

Proposition 5. $B \cup \bigcap_i A_i = \bigcap_i (B \cup A_i)$

Let $\{A_i\}$ and $\{B_i\}$ be families of sets.⁵

Proposition 6. $(\bigcup_i A_i) \cap (\bigcup_j B_j) = \bigcup_{i,j} (A_i \cap B_j)$

Proposition 7. $(\bigcap_i A_u) \cup (\bigcap_i B_i) = \bigcap_{i,j} (A_i \cup B_j)$.

Proposition 8. $\cap_i X_i \subset X_j \subset \cup_i X_i$ for each j.

³Statements of these will be given in future editions.

⁴Accounts will appear in future editions.

 $^{^{5}\}mathrm{An}$ account of the notation used and the proofs will appear in future editions.
